

# Gover Road, Cornwall

## Client Background: A Family in Need

Meet Will, a dedicated partner living in a charming bungalow in Cornwall. Like many families, Will and his partner faced a hidden enemy—poor indoor air quality. With his partner suffering from asthma, a condition that affects 1 in 11 people in the UK, the stakes were high. They knew that their home environment was critical for her health, especially since research shows that damp and mouldy conditions can increase respiratory risks by 30%.

In their regular-sized bedroom, persistent dampness led to mould growth, creating a breeding ground for discomfort and health concerns. Will watched helplessly as the damp air affected his partner's breathing, forcing her to avoid the room altogether. This was more than just a nuisance—it was a barrier to their happiness.

## The Turning Point: Specific Goals

Will knew he had to act. His goals were clear:

1. **Breathe Easy:** Improve air quality to ensure his partner could breathe freely and comfortably.
2. **Mould Be Gone:** Eliminate the mould that triggered asthma attacks and compromised their health.
3. **Comfort Redefined:** Create a serene space for his partner's part-time beautician business, where humidity control is paramount.

## The Solution: FLUXO Unit Installation

After extensive research, Will discovered the FLUXO unit—a revolutionary mechanical ventilation system designed to combat indoor air quality issues. Here's how VENTI, a Cornwall-based ventilation company based in St Austell, stepped in to transform their lives:

- **Comprehensive Assessment:** Our experts conducted a meticulous evaluation of the bungalow, pinpointing sources of dampness and mould.
- **Seamless Installation:** The FLUXO unit was installed with precision, featuring:
  - **Whisper-Quiet Operation:** A brushless motor ensures peace and tranquillity.
  - **Heat Recovery System:** Maximises energy efficiency while maintaining comfort.
  - **Easy Maintenance:** A removable filter for hassle-free upkeep.

## Remarkable Results

The impact was nothing short of life-changing:

- **Humidity Control:** Humidity levels dropped from 60% to 40%, creating the perfect environment for beauty treatments.
- **Mould Elimination:** Will witnessed a staggering 90% reduction in mould occurrences during damp months, transforming their indoor environment.
- **Cost Efficiency:** With running costs around £5 per year, the FLUXO unit proved to be an economical alternative to traditional dehumidifiers.

## A New Beginning: Client Feedback

Will's joy was palpable. He shared,

*"The air quality in our home has improved dramatically. My partner can now work comfortably in the room, and the mould issue has been completely eradicated. It's a relief to know we're living in a healthier environment."*

## **Why This Matters**

Healthy indoor air quality is essential. With 5.4 million people in the UK affected by asthma, solutions like the FLUXO unit are not just beneficial—they're vital. By addressing mould and air quality issues, Will took a significant step towards a healthier home, contributing to broader public health goals.

## **Take Action Now!**

Is your home affected by poor air quality? Don't wait for health issues to arise. Contact VENTI today for a consultation and take the first step towards a healthier, happier living environment.
