

Great British Insulation Scheme (GBIS)

The Great British Insulation Scheme (GBIS) is a government initiative aimed at improving energy efficiency in homes across the United Kingdom. Launched as part of broader efforts to tackle climate change and reduce energy bills, the scheme provides financial support for homeowners and landlords to install insulation in their properties.

The GBIS focuses on retrofitting existing homes with insulation materials that enhance thermal performance, thereby reducing heat loss and making homes more energy-efficient. This initiative is particularly important in the context of the UK's commitment to achieving net-zero carbon emissions by 2050.

- **Financial Assistance:** The scheme offers grants and funding options to cover a significant portion of the costs associated with insulation installation.
- **Target Audience:** It primarily targets low-income households, vulnerable residents, and landlords of rental properties.
- **Types of Insulation Covered:** The GBIS typically supports various forms of insulation, including loft insulation, cavity wall insulation, and solid wall insulation.

The GBIS is part of a larger strategy involving various energy efficiency measures, including the Energy Company Obligation (ECO) and the Green Homes Grant. These initiatives collectively aim to reduce carbon emissions, improve living conditions, and alleviate fuel poverty in the UK.
