

# **Federation of Damp Announces New Member Benefit Partnership with VENTI Group**

**LONDON, UK - April 25, 2025** - The Federation of Damp (FOD), a leading UK body for professional training and certification in the damp surveying and treatment industry, today announced a new partnership with VENTI Group Ltd (VENTI), a prominent supplier of residential ventilation systems. Effective April 24, 2025, this collaboration provides all FOD members with an exclusive discount across VENTI's entire range of ventilation products, aimed at supporting professionals in tackling damp and improving indoor air quality, particularly within retrofit projects across the UK. This initiative underscores FOD's commitment to providing practical resources and tangible benefits to its growing membership base.

Poor ventilation is a primary contributor to condensation and mould growth in homes, especially in moisture-prone areas like kitchens and bathrooms, and often requires addressing in retrofit scenarios. This partnership provides FOD members easier access to crucial tools for mitigating these issues. VENTI specialises in continuous mechanical ventilation systems designed to combat dampness by ensuring consistent air exchange. Their product range includes solutions vital for modern building health standards, such as Demand-controlled Mechanical Extract Ventilation (DMEV) systems like the ARIA, and Decentralised Mechanical Heat Recovery Ventilation (dMHRV) units like the FLUXO and AUREN, which are particularly effective in upgrading ventilation in existing dwellings.

Sam Fitzgerald, Managing Director of the Federation of Damp, commented on the partnership: "Really proud to share another new benefit we've added for Federation of Damp members. We've just partnered with VENTI Group to offer an exclusive discount on all their ventilation products. It's a small win, but this is exactly what the Federation is about — giving proper professionals real support, practical resources, and access to tools that actually make a difference on site. The feedback from surveyors and contractors since launching has been amazing — and this is just one of many perks we're rolling out."

Bradley Pallister, Technical Manager at VENTI Group, added: "VENTI is delighted to partner with the Federation of Damp. Equipping FOD's certified professionals with easier access to effective continuous ventilation solutions, particularly for retrofit scenarios, aligns perfectly with our mission to create healthier living environments across the UK. We believe this collaboration will empower members to tackle damp and condensation issues more effectively using proven technology."

FOD members can access their exclusive discount code immediately via the members' portal on the Federation of Damp website. This partnership reinforces the importance of installing appropriate, continuous ventilation systems as a fundamental part of damp remediation and prevention strategies, contributing to healthier, safer homes.
