

Global Reset? Create your own private Eden.

Global.Reset.

What comes to mind when you read those 2 words? An apocalyptic event? Catastrophe? Or something less ominous? Perhaps the switch to renewable energy, cleaner air? You can see where I'm going with this already?

With 80% of our time spent indoors - even if the global reset meant a restoration of Eden, and zero air pollution outdoors, it would have little effect on us inside dwellers. It's our Indoor Air Quality that needs a reset.

Bringing Eden Indoors - why Sacrifice the air of your Sanctuary?

It's time to change the air. And we mean the air you breathe for the majority of your life: Your Indoor Air Quality. Indoor air can contain between **2 to 5 times** higher concentrations of some pollutants than typical outdoor environments. Some of these pollutants are:

- Biological Pollutants.
- Carbon Monoxide (CO)
- Particulate matter - Airborne particulate matter (PM) is not a single pollutant, but rather is **a mixture of many chemical species**. It is a complex mixture of solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings.
- Formaldehyde/Pressed Wood Products.
- Lead (Pb)
- Nitrogen Dioxide (NO₂)
- VOCs - Volatile Organic Compounds. For example these are found in cleaning supplies, paints, lacquers and strippers, building materials such as carpeting and furnishings.

Your Sanctuary - Your home - Your workplace, anywhere you breathe air indoors, shouldn't have a detrimental effect on your health.

Why should I care about my Indoor Air?

Well, according to the National Institute of Environmental Health Sciences; "Indoor air quality is a global issue. Both short- and long-term exposure to indoor air pollution can cause a range of health issues, including respiratory diseases, heart disease, cognitive deficits, and cancer. As one prominent example, the World Health Organization estimates [3.8 million people](#) worldwide die every year from illnesses attributable to harmful indoor air." So, you should care. Quite a bit actually.

Several illnesses can be both caused or aggravated by poor indoor air quality and high

concentrations of pollutants indoors. For example:

- Asthma & other respiratory conditions
- [Impaired health and performance in children and adults.](#)
- [Increased chance of developing lung cancer](#)
- Reduced cognitive ability
- Stress
- Fatigue
- Headaches

Okay - Convinced? Here's how we can Change Indoor Air Quality for the better.

You can [#breathfreely](#) . We are VENTI, the [#cleanairmovement](#), and clean air is our passion. And although we can't cause a global reset and restore our outdoor air to an Garden of Eden like state, we are changing the world of *indoor* air quality, one sanctuary at a time!

How we are changing the world of Indoor Air Quality

Enter our [FLUXO mechanical ventilation system](#). It's like living in your own private Eden! (*Minus all the animals and impressive trees with the power to bring knowledge and everlasting life of course.*) But we can provide you with the clean, pure, filtered air – minus the nasty pollutants and toxins that come with everyday living on Planet Earth these days. Breathe it in. You're welcome.

Our FLUXO is simple in design, but packs a mighty punch when it comes to supplying fresh air into homes! Here are some of it's benefits;

1. The unit supplies fresh filtered air in from outside for 70 seconds then reverses and extracts the stale air outside.
2. The 70-second cycle is continuous 24/7.
3. Over 82% of the heat is retained inside the property due to an innovative heat exchanger located inside the core.
4. If the switch is fitted, operation can to be set to extract only (ideal for overheated rooms).
5. It is an ideal solution for the removal of CO2 and any other indoor volatile pollutants as well as preventing condensation and mould problems which inevitably damage the building and occupants' health.

We can't keep quiet about our FLUXO. But thankfully It can!

Ultra quiet operation means it is perfect for installation in a single room such as a living room or bedroom.

For better flow balancing, two units can be synchronised and used in parallel operation.

Eden. Restored. (At least in your Indoor Sanctuary)

And with that all said – what's stopping you from heading on over to our [FLUXO](#) and adding to your basket? Restore your indoor air to the way it is meant to be – Fresh, Clean and Temperature controlled. And with every breath, you can be assured can be sure no nasties are causing health havoc.

(Disclaimer: We can't guarantee that any nasty serpent creatures won't visit , but it definitely won't

be through our FLUXO air vent.)
