

Air Passport™ Retrofit Ventilation Strategy Service

Are you tired of invisible risks? The **VENTI Air Passport™** is the gold-standard design documentation that secures Part F (2021) compliance, eliminates renovation guesswork, and guarantees a home that is truly fit to breathe.

SECURE YOUR FREE AIR PASSPORT DESIGN NOW

Your Compliance Burden Ends Here

Stop the Scares. Start the Certainty.

The True Cost of Guesswork

For Architects, Specifiers, and Contractors, the biggest threat is not the renovation itself—it's the **costly, painful risk** of non-compliance.

- **□ Building Control Refusal:** Your project stalls. You are forced into expensive, disruptive remedial work (even reverting to oversized trickle vents). The **Air Passport** is specifically formatted to **smooth the way for inspector sign-off**, turning approval into a predictable step, not a gamble.
- **□ The Invisible Health Threat:** The media is right: silent mould and moisture are destroying homes and health (Awaab, Ella). Homeowners are terrified this will happen to them. **The Air Passport** is the proactive document that proves your commitment to their family's health.

The Air Passport™ Difference: Precision Over Power

We don't just specify big fans; **we sell specified airflow**. Our complimentary strategy service replaces generic solutions with **certified, room-by-room precision**.

Why Architects & Contractors Trust The Air Passport:

- **Precision Performance Guaranteed:** Each room is tuned to a specified fan, fan speed, and noise level. Zero guesswork, zero drafts, and a guaranteed quiet outcome.
- **Compliance Confidence (Part F, PAS 2035):** The documentation is Building Control-ready. We provide the evidence pack that smooths the path for sign-off on your toughest retrofit projects.
- **Bypass the Trickle Vent Trap:** The doubling of required trickle vent sizes is ruining window aesthetics and compliance. Our decentralized strategy provides the modern, high-performance

alternative.

- **Health & Energy Metrics:** Includes calculated SFP (Specific Fan Power) and the precise filtration/attenuation needed for your family's specific health requirements.

What's Inside Your Digital Air Passport Dossier?

The Air Passport™ is your **Golden Thread** of ventilation documentation, fully aligned with PAS2023/PAS2035 and Eco4 standards. This is the single, auditable pack you need from design through to handover.

- **Room-by-Room Precision Design:** Specified fan type (dMEV/MVHR), calculated airflow rates, noise prediction, and SFP data for every space.
- **Building Control Submission Pack:** Clear linkage to Approved Document F clauses and evidence required by inspectors.
- **Health-Focused Component List:** Specification of the necessary filtration and acoustic attenuation for a truly healthy home.
- **Dedicated Concierge Support:** Your single point of contact for installation advice and complex Building Control queries, dramatically reducing your renovation overwhelm.
- **Future-Proofing Asset:** A digital dossier that enhances the home's value, acting as proof of certified performance for future buyers.

Act Now Before Regulations Tighten Further

Updated Part F enforcement is increasing its scrutiny on retrofit projects.

Engineered for Silence & Style: Our strategies eliminate disruptive ductwork and noise. We specify our premium components, ensuring the system protects your home's façade, not spoils it.

Secure your complimentary Air Passport™ design today—and lock in certified compliance for every project in your pipeline.
