

BASE 100 100mm Weatherproof Multi-Functional Subfloor Ventilation Fan

The **VENTI BASE 100** is a weatherproof fan unit designed for easy external mounting, ideal for continuous subfloor ventilation. Many subfloor spaces lack adequate natural ventilation, making mechanical solutions essential. The VENTI BASE 100 was specifically engineered for these applications.

Its combination of wide airflows and various control modes gives ventilation system designers flexibility and choice.

Features and Benefits

- **Weatherproof Design:** Unique design allows for external mounting, simplifying installation and maintenance.
- **Low Energy Costs:** Operates continuously with typical electrical costs under **£9 per year**.
- **Flexible Operation:** Offers continuous operation at an adjustable trickle speed and an adjustable boost speed activated by an external switch.

Modes of Operation

The integral controls allow the fan to be set to operate at a trickle speed during installation. When connected to a boost switch, the fan runs at a predetermined speed when the switch is activated, automatically reverting to trickle speed once the switch is open.
